

Limestone is a sedimentary stone that is formed in warm, shallow marine waters over millions of years. Composed mostly of calcium and fragments of marine organisms such as coral and shells.

Crema Novelda Sandblasted & Tumbled Cobblestones are characterised by an ivory base with warm golden fossiling throughout.

This cobblestone is an artisan crafted stone with tumbled edges and a sandblasted surface for an organic aesthetic.

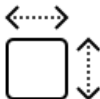

NOTE: Shade/batch variation is an inherent characteristic of all natural products. The colour of the material supplied may vary to samples/images provided.
