

Limestone is a sedimentary stone that is formed in warm, shallow marine waters over millions of years. Composed mostly of calcium and fragments of marine organisms such as coral and shells.

Sinai Pearl Acid Washed & Tumbled Tiles are characterised by a blend of light to medium earthy brown tones with quartz flecks throughout.

This is an artisan crafted stone with tumbled edges and a acid washed surface for an organic aesthetic.

NOTE: Shade/batch variation is an inherent characteristic of all natural products. The colour of the material supplied may vary to samples/images provided.

Material
limestone

Finish
acid washed

Edge
tumbled
