

Limestone is a sedimentary stone that is formed in warm, shallow marine waters over millions of years. Composed mostly of calcium and fragments of marine organisms such as coral and shells.

The Leyla dark grey tumbled limestone crazy paver is distinguished by its deep and inky hue with flecks of snow that bring a stark and eye catching contrast to the stone. The versatile colour makes it an ideal choice for both classical and modern projects.

This crazy paving is an artisan crafted stone with tumbled edges and a brushed surface for an organic aesthetic.

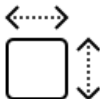

NOTE: Shade/batch variation is an inherent characteristic of all natural products. The colour of the material supplied may vary to samples/images provided.
