

Sandstone is a clastic sedimentary rock composed mainly of sand-sized and silicate grains. Comprising mostly of quartz sand, it can also contain amounts of feldspar and sometimes silt and clay.

Arizona Loose Random Wall Cladding is characterised by a blend rusty desert tones and light ivories.

This cladding is an artisan crafted stone with tumbled and rocky edges to achieve an organic and textural aesthetic.

NOTE: Shade/batch variation is an inherent characteristic of all natural products. The colour of the material supplied may vary to samples/images provided.
