

Marble is a metamorphic rock, formed when limestone is exposed to high temperatures and high pressure. The calcite in the limestone re-crystallises forming a denser stone.

Casuarina Loose Random Wall Cladding is characterised by a blend of whites with warm golden tones throughout.

This cladding is an artisan crafted stone with tumbled and rocky edges to achieve an organic and textural aesthetic.

NOTE: Shade/batch variation is an inherent characteristic of all natural products. The colour of the material supplied may vary to samples/images provided.
